The professional team of OnTheLink makes sure you get the best help for free at all times!

QGIS Script Instructions

OnTheLink

QGIS INSTRUCTIONS

Original Version (untranslated)

South-Holland - Leidschendam

© OnTheLink 2020 - All rights reserved

Introduction

1. Preparation.
2. Connection to the internet.
3. Getting the script.
4. Installation.

Preparation

Step 1: Setup the chromebook and login on the account where QGIS should be installed on.

Step 2: Make sure you're connected to a stable network connection.

Step 3: Go to the settings and install linux (bèta), if you don't see linux anywhere in the settings then your chromebook doesn't support the linux container. Wait until the terminal opens...

Step 4: Now write exit and press "RETURN" (ENTER).

Step 5: Reboot the chromebook and login with the same QGIS account again..

You are now done preparing the chromebook!! Did something go wrong? Contact us on mishaopstal2004@gmail.com for further assistance.

Connect to the internet

Make sure you are connected to a STABLE internet connection!!! This is very important for the installation..

WARNING:

A bad connection can cause a nonfunctional QGIS and the whole linux container of the chromebook! If this happens you will need to powerwash the chromebook or reset it using a recovery usb/sd card. You will also have to repeat the steps from preparation.

Getting the script

Step 1: Go to <https://github.com/onthelink-nl/scripts>.

Step 2: Copy the script code (you can find it inside the readme file on the github page)

TIP: The script should look like this:

```
sudo curl -LO https://some_url.com/raw/Some_File.sh && bash "Some_File.sh"
```

Installation

Step 1: Turn on the chromebook and login on the same QGIS account from before.

Step 2: Check your internet connection and make sure that it's stable.. (IMPORTANT)

Step 3: Open the terminal and paste the script that you got from "Getting the script" (paste using the ctrl+shift+v instead of ctrl+v).

Step 4: Choose the option(s) that you need (PLEASE READ THE OPTIONS BEFORE USING THEM!!!!).

Step 5: After you completed the installation and if everything completed like it should then you will be able to find "QGIS Desktop" at the menu of the chromebook (the one on the taskbar where all programs are listed).

Step 6: Open "QGIS Desktop" and choose the second option (if required), after that close "QGIS Desktop" (Only close if "QGIS Desktop" launched like it should launch).

Step 7: Now you have to reboot the chromebook to make the saving functionality of QGIS work. (STRETCH ONLY)

That's it! You just installed QGIS on your chromebook! login with the QGIS account from before to use the program. To start our auto-updater please reboot the chromebook, log into the account and connect to the internet, now start any linux app and wait 60 seconds and it will start to update.

These are the instructions to install QGIS on your chromebook.

=====

The QGIS program is a program that is mostly used at schools and sometimes at work too,
But it can be used for personal use too.

The purpose of QGIS is to get information about the Geographic information system very easily.

=====

We want to let you know that OnTheLink and QGIS are not working together and we are not the creators of this program. If you have questions about QGIS but **not** the installation of it you need to contact them instead of us!

=====

Do you have questions about the installation of QGIS or OnTheLink?
